

CLEVER

Lead Pipeline Reliability — Working Session Agenda

Prepared by Hunter Doster · Live session with Clever Product Leadership

60 MINUTES

01 · Welcome & Product Intro

5 MIN

Quick framing of the Lead Slip Detector and the core problem it solves.

02 · Live Demo

15 MIN

Walkthrough of the six-module pipeline and dashboard, live on Railway.

03 · Assumptions & Clarification

10 MIN

CLARIFICATION

- Is "Skipped by Dialer" detected differently than "Never Touched," or is it the same failure state with a different root cause?

ASSUMPTION CHECKS

- Does the tiered priority (Tier 1 Never Reached, Tier 2 Duplicate Contact, Tier 3 Customer Feedback) match how leadership would prioritize these slip types?
- In the demo, does prioritizing more recent slips as most urgent make sense to the team?

04 · Open Questions

15 MIN

COST PICTURE

- What is Clever's actual lead-to-close conversion rate?
- What is average revenue per closed lead (referral % and transaction value)?
- How many total leads does Clever receive per day/week/month?
- Does Clever track close rate by time-to-first-contact?
- When duplicate contact occurs, how much does it degrade conversion?
- How many partner/customer complaints have been received about no-contact leads, and what was the impact?

WEEK 1

- What CRM system is Clever using?
- How can slipped leads be pulled into the CRM?
- What is the process for routing a slipped lead back to the team?
- How are we notified of a lead-slip customer complaint? What is the current process and historical cost of this slip type?

MONTH 1

- What is Clever's current standard for first outreach?
- What contact speed is achievable given current staffing and dialer config?
- Should the threshold be 5 min (best practice), 60 min (current baseline), or in between?
- What infrastructure, dialer logic, and CRM config are required to hit that target?

05 · Discussion, Decision Points & Next Steps

15 MIN

Decision 1 — Engineering Approach

Which model builds the permanent system: traditional development or AI-agent driven development?

Decision 2 — Plan Approval

Option 1

Approve & implement as-is

Option 2

Changes needed, then implement

Option 3

Larger changes required, follow-up session

Action items, owners, and dates captured live during the session.
